

Global Maths

3 starter activities for bringing Global Citizenship into the maths classroom.

Maths can help your learners better understand different people, places and patterns in the world. Teaching it with a global angle can also give an insight into how maths can be applied and used to address and inform real-world issues.

Here are some topical activity ideas to get you started.

Percentage in a Global Context

How might a rise in global temperature impact on food production?
Look at the impact of this rise on world staples wheat, maize and rice.

Grain trapped in Ukraine

Use fermi estimation to think about how serious this problem is for Ukraine and the wider world.

Veganuary

With a focus on using percentage – these activity ideas build understanding around climate change and food production.
